### What's New in the?

Vov EXE Joiner is a small application that provides you with a simple solution - pack all your files in a single executable, which can be extracted on any PC, at any time, without requiring additional software. Vov EXE Joiner has to be one of the most simplistic tool to unpack files into an executable archive. It is extremely easy to use and comes with only a few options to control the result. The program doesn't have any additional features and won't ask for a license key, which is a plus. But, it does have its shortcomings. Vov EXE Joiner will not decrease the file size. It's main purpose is to make your files more portable. But, if you're looking to unpack several items and reduce their size, then you should consider downloading a simple archiving program, like 7-Zip. There is also a search feature, although it doesn't work very well and the names of the files are converted to uppercase automatically, which can be quite a hassle. Vov EXE Joiner only offers 2 different output formats, which is also an inconvenience. By default, the executable will open as Windows Installer, which can be rather lengthy. But, if you're not an expert, then the result will likely look the same. If you want to extract all the files, it is also difficult to determine which items are already present and which ones are not. You will have to go through the list manually and remove the unwanted files. There's no preview function, so you'll have to trust that the program knows what it's doing. It can also not open archives larger than 2GB, which is also a drawback. But, it is still very easy to use, so if you just need to pack a few files into a single executable, then this can be a good solution. Features: Vov EXE Joiner is a very simple and easy to use program that will only require you to import the files that you want to merge and then click on the Create EXE button. You can choose the format in which the program will output the files (Exe or MSI), the program's size and the location that it will be saved to. You will be prompted to choose the number of files to pack into the executable. Select the files to be added, choose the path in which they are located, set the location in which the final output file will be created and then click on the Create EXE button. When the creation is finished, the program will present you with the information on the progress. The output file will be downloaded to your computer, and it will only take a few minutes. What's New in this version: - Fixed an issue that caused Vov to fail on 32-bit systems. 8.7 Dec. 7, 2015 Tested on Windows 7/8

---
