The reading of information from the products and services of the company is completed through the barcode. This barcode has nothing to do with the barcode shown in the applications where it is linked to the

information to be read. Therefore, this barcode does not need to be inserted in the beginning of the application, and it can be attached to the end. While you will find two addons included in the application, the first one is the barcode reader bar, the second one is the Portable Audio Player. In MEO Reader, you can listen to the radio without disturbing the time of your PC. The radio will not consume any more memory and no longer use CPU resources. As this is a barcode reader, you can also view the description of the products and services of the company. And what is especially interesting, is that you can export the information from your PC to a file which is saved on the SD card of the Mobile. This is one of the best applications for the Android because of its simplicity and efficiency.
