A really fast bike, the 1190 is best on a road or trail ride. It's thirsty, it needs oxygen and, apart from a thrumming exhaust note, is fairly silent. On one job it is worth considering. In fact, with the A1 version, it is essential. The heaviest and longest-wheelbase of the Super Adventures, it's this version that incorporates the largest fuel tank. There are two reasons for this. Firstly, that's where KTM's production engineering and production facility is based. Secondly, a bigger fuel tank means a longer ride without refuelling, a real benefit when the weather is fine and the demand for miles of gradual riding is high. The 1190 has a larger tank because we have also lengthened the overall length of the 1190. The frame has been reworked. Internally, it's been tailored to suit the 'Adventure' class. The front triangle, while larger than before, remains identical to the part that lends the bike its character. Back-up camera on That said, KTM has done more than just change the frame; it has also added a back-up camera to every 1190 Adventure. The camera is mounted in a fixed position on the top of the windscreen, so that it looks over the rider's left shoulder, offering a view into the back of the headlight at all times and ensuring that the rider has good visibility. It can be displayed as a live feed during rides and when the bike is
