Not only are industrial PCs an integral part of Beckhoff customer engineering and control, but they also play an important role in Beckhoff's own engineering and production processes. From the initial target configuration to the final control system, the engineering, production, and quality testing of industrial PCs are in-house. Designing industrial PCs is an engineering process. It is therefore a matter of skill to see what degree of flexibility you can use to achieve the specific performance requirements for your application. The flexibility of industrial PCs from Beckhoff is restricted only by the limits of the target platform. That is why you can commission a variety of versions of a system: different versions for different models of industrial PC or for different performance levels within a model. The range of industrial PCs from Beckhoff encompasses all application segments: You can thus set up an industrial PC suitable for an electric vacuum cleaner control system as well as a smart production cell for precision electronics. Processes controlled by industrial PCs are ideally suited to industrial as well as to automation technologies. Industrial PCs from Beckhoff are characterized by a high degree of integration for control and automation systems. The large number of optional interfaces enables you to install industrial PCs in a large variety of automation applications. Beckhoff is one of the pioneers of PC-based automation: the first PC control system was delivered as early as 1986. Since then, the company has developed a broad spectrum of hardware and software products and has become an industry-leading provider of automation systems.

In addition to standard plug-in Industrial PCs, Beckhoff offers solutions for process measurement and control including ultrasonic sensors, variable-frequency drives and PLC functions in compact, compact PCs and heavy-duty industrial PCs. Beckhoff interfaces are state-of-the-art and can be combined with customer-specific software to meet process control and process measurement requirements. In addition, all Beckhoff products are protected by an extensive assortment of service and guarantee provisions. Beckhoff is one of the pioneers of PC-based automation: the first PC control system was delivered as early as 1986. Since then, the company has developed a broad spectrum of hardware and software products and has become an industry-leading provider of automation systems. Industrial PCs can be designed and built for customer-specific requirements. The spectrum of options is exceptionally broad and ranges from company logos or special labels and individualized functions to Industrial PCs built in total accordance with the customers corporate design. Customers can also integrate their automation systems with other Beckhoff products. All Beckhoff products are protected by an extensive assortment of service and guarantee provisions. A series of specially adapted software developed by Beckhoff will be presented at the exhibition. In particular, industrial PCs support the required temperature measurement and provide interface and communication options. The individual fields of application can be accessed by the individual user. The industrial PCs also provide comprehensive functions. Users receive integrated monitoring and diagnostics information, and can direct the energy consumption process from the industrial PC to the supply system. Many companies acquire their equipment, pc control systems and software from Beckhoff, including such renowned companies as Siemens Business Systems, ABB, Altronic, Brose, Daimler, Kion, Delphi, and Audi. 5ec8ef588b
